

UERRA year 1

Review questions & comments

Mikko Strahlendorff

Precursor phase?

“ UERRA is one step before operational service

“ Demonstrating usecases as one goal

“ Reanalysis service is only surfacing after big efforts to have data sets

“ Try to analyse global analysis gaps for users

Remarks from evaluation, have these improved now?

“ Evaluation summary report: 10 points only: ☹

“ WP2 makes no explicit reference to any other WPs or their outputs.

“ description of impacts in the proposal is relatively general

“ user communities are not discussed in sufficient detail.

“ better engage their users, especially in the policy area

“ My impression now: ☺

“ You're doing better, just show it more in your reports as well

“ Make crossreference checks for deliverables to suggest more WP to WP links to be hi-lited!

WPI Q&C

“ GOOD stuff!

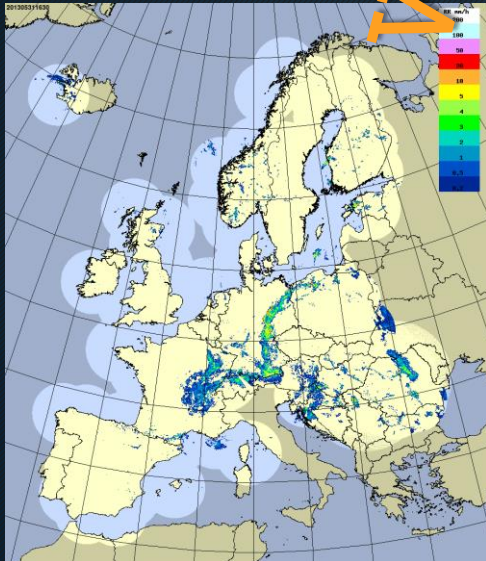

“ ERAClim2 DaRe parties to be consulted to make MARS connection effective?

“ Sweden & Romania - use the argument that a positive new service can be attacked by not having your own data in it. Tell you hierarchy:

“ Shame? or scan quickly and let URV help u!

WP2 Q&C

- “ Harmonie delays are reasonable, but try to gain back timeline soon!
- “ 50y data set might be the prominent product of UERRA
- “ MetOffice – convincing progress
- “ Data policy going free/open?
- “ European effort - show it more; share share share (WP4 does!)
- “ Collaborate more on MARS and ECMWF computing infrastructure; it's connecting u
- “ HARMONIE collaboration is like the European dream – more!
- “ **Parameter lists for archiving!! Pronto ☺**

WP3 Q&C

“ Evaluation procedures

“ www.icos-cp.eu has masts around Europe that don't get assimilated, some have 1-2 decades of data

“ Why not try Opera radar data? This is research ☺

“ Focus on finding what quality demonstration is needed internally what to the outside:

“ Show what climate is now in detail for small areas in Europe!

“ Software sharing very good area to collaborate on

“ Core-Climax RA user survey crunchdown for European high spatial and temporal resolution and extreme event users worries?

WP4...9 Q&C

- “ Coordination with ClipC makes delay of 4.2 reasonable
- “ Don't rely on others solving UERRA dissemination
- “ ClipC is supposed to build on whatever UERRA uses
- “ Cool to get MARS data into euro4mvis!
- “ Facilitating downstream – private companies identified from E-OBS users?
- “ EUPORIAS assemblies to be on UERRA meetings
- “ During UERRA project timeframe C3S is in preoperational phase – organise MARS accordingly
